## CAUTION

1. Net rated loads are performance when the crane is placed level and is based on an actual working radius including boom deflection under load.  
Net rated loads are also based on the strength of the crane and the stability of the crawler.
2. Net rated loads must be reduced in accordance with wind, ground condition and operating speed.
3. Net rated loads are the lifting capacities excepted for the mass of the hook.
4. The mass of the slings and any accessories attached to the boom or load line must be deducted from the above net rated loads in the chart.
5. When the outriggers are set without extending to their maximum, stability of the crane deteriorates remarkably.  
Pay attention that the net rated loads are changed according to how far the outriggers are extended.
6. If any one of the four outriggers is not fully extended, operate with performance of not maximum extension.
7. In order to make correct operation, read the instruction manual carefully before crane operation.
